RSA Conference 2009
The Moscone Center
Booth # 1549

For Immediate Release:

HOB Showcases New Remote Access and Virtual Desktop Products at RSA Conference 2009 in San Francisco

SAN FRANCISCO (April 21, 2009) – [HOB, Inc.](#) is showcasing this week at the [RSA Conference 2009](#) its latest remote management/VPN (Virtual Private Network), RDP (Remote Desktop Protocol) and VDI (Virtual Desktop Infrastructure) solutions.

“We look forward to demonstrating the value of our products to this year’s RSA Conference attendees,” said Klaus Brandstaetter, CEO of HOB, Inc. “Given the compelling value of our remote management product line, we anticipate much interest from attendees and prospective customers.”

HOB will showcase the following products at its booth # 1549:

- [***HOB Remote Desktop VPN 1.3***](#) – is the company’s latest version of its browser-based secure remote access software. The solution, certified in accordance with the [Common Criteria](#), addresses the needs of telecommuters, mobile workforces and remote offices. The *HOB Remote Desktop VPN*, which includes the latest version of the [Java-based RDP client](#), features expanded file access and print functionality as well as SSL encryption and strong authentication.
- [***HOBLink JWT \(Java Windows Terminal\) 3.3***](#) – is a Java-based RDP client which provides platform-independent remote access to applications centrally installed on [Windows Terminal Servers \(WTS\)](#). With the new *HOBLink JWT version 3.3* client, enterprise organizations can leverage all the advantages of server-based computing for Windows, Unix and Mac OS X applications. From an IT management perspective, *HOBLink JWT* allows users to conveniently and securely access centralized applications and data from any client independent of its operating system (Apple Mac OS X, UNIX/Linux, Microsoft, etc.).
- [***HOB VDI Business***](#) – is a new VDI solution that enables companies to centralize their desktops in the data center which eases administration while improving security. The solution provides users with end-to-end access to virtual desktops. With HOB’s VDI technology, single-user operating systems do not run on a user’s workstation, but in the

data center instead. This VDI solution, which grants access to virtual machines running Windows XP Professional and Windows Vista, is part of HOB's product line of Remote Desktop Solutions.

About HOB, Inc.

HOB, Inc. is a fully owned subsidiary of the software development and network service provider HOB GmbH & Co. KG, a member of the Brandstätter Group, headquartered in Bavaria, Germany. HOB, Inc. was founded in New Jersey in April 2000 and is currently headquartered in Hawthorne, NY. HOB GmbH & Co. KG is a mid-sized German software enterprise that develops and markets innovative remote access solutions worldwide.
